Experience

Scrawlr

Software Engineer, Infrastructure

Sep 2025 - Dec 2025

Vancouver, BC

- Built an agentic remediation system triggered by Sentry webhooks, automating incident diagnosis, corrective actions, and escalation to reduce production MTTR by **over 90%**.
- Integrated an MCP server and Puppeteer browser automation with production logs and read-only source access, enabling autonomous investigation and validation of remediations.
- Built containerized CI/CD pipelines for QA and production with build caching and Terraform-managed infrastructure, increasing QA throughput by **50%** through isolated per-PR deployments.
- Led full-stack delivery of property listings and real-time host-guest messaging, reducing reliance on external platforms and simplifying booking workflows.

UKG

Software Engineer, Mobile Platform

May 2025 - Aug 2025

Toronto, ON

- Extended UKG Pro release CI/CD to prebuild rollback APK/IPA artifacts from prior stable code with higher version numbers; standardized recovery procedures, reducing rollback deployment time by **50%**.
- Refactored UKG Pro's Ionic-based mobile foundation, replacing duplicated iOS/Android code with reusable modules to reduce post-merger technical debt and support integration of acquired apps.
- Reduced service registry traffic by **over 70%** using proxy routing with tested service-discovery fallback.
- Extended UKG Pro monitoring beyond server logs to client-side mobile platform failures, including white screens, using Splunk dashboards and PagerDuty/Slack alerts to reduce incident response time by **30%**.

Metergy Solutions

Software Engineer

Jan 2024 - May 2025

Markham, ON

- Built an AI OCR pipeline that converted utility-bill PDFs into structured data and routed low-confidence results for human review, reducing manual processing effort by **80%**.
- Raised ingestion reliability from **70% to 99.9%** for **10,000+ IoT meters** by replacing FTP and cron jobs with HTTP microservices that processed raw device data and loaded it into the database.
- Built an offline-first platform for Field Ops with local persistence and authenticated cloud synchronization, strengthening data integrity and delivering an **estimated 50%** average efficiency gain.
- Rebuilt legacy Microsoft Access tools as a modular monolith supporting **10+ independent applets**, with a headless Django API and a decoupled Vue SPA using an App Shell.

Education

University of Waterloo

Honours Bachelor of Computer Science, Co-op

2021 - 2026

Technical Skills

Languages: Python, TypeScript/JavaScript, Java, C#, Go, C++, Kotlin, Swift

Backend and Data: FastAPI, Django, Node.js (Fastify), Spring Boot, PostgreSQL, MySQL, Redis

Cloud and CI/CD: AWS, GCP, Docker, Kubernetes, Terraform, Pulumi, GitHub Actions, CircleCI

AI and Automation: Agentic workflows, Model Context Protocol (MCP), Puppeteer, OCR

Observability: Sentry, Splunk, Prometheus, Grafana

Frontend and Mobile: React, Vue.js, Ionic Framework, SwiftUI, Jetpack Compose
