WORK EXPERIENCE

Software Engineer (Co-op) | Scrawlr
Vancouver, BC, Canada — Sep 2025 – Dec 2025

- Shipped Lodgr's listing and property-management features **from zero to production in three weeks**, leading full-stack development with **Node.js and SolidJS** and coordinating with designers and QA.
- **Reduced mean time to resolution (MTTR) by 60%** with a **multi-agent LLM incident response system** using independent fix validation, human approval, and timeout-based escalation.
- **Increased features shipped per week by 50%** by automating isolated per-branch AWS environments with Terraform, GitHub Actions, and CircleCI, eliminating QA bottlenecks.
- **Reduced email notification delays from up to one hour to real time** by replacing hourly cron jobs with an event-driven **Amazon SQS pipeline** with retries and failed-message tracking.

Software Engineer (Co-op) | UKG
Toronto, ON, Canada — May 2025 – Aug 2025

- Migrated UKG Mobile Gateway (**Java, Spring Boot**) from service discovery to proxy routing with **zero downtime** through fallback routing and a feature-flagged gradual rollout.
- Built **Splunk dashboards** and configured **PagerDuty alerts** to surface mobile client-side failures and support production incident investigation.

Software Engineer (Co-op / Contract) | Metergy Solutions
Markham, ON, Canada — Jan 2024 – May 2025

- Modernized Microsoft Access tools using **Python (Django), Celery, Redis, and Vue.js**, enabling concurrent team access and cutting job runtimes by **up to 50%**.
- Built an **ASP.NET Core ingestion service** for **10,000+ IoT meters**, handling missing and duplicate readings and improving daily data receipt from **approximately 70% to 99.9%**.
- Built a WPF app with an **ASP.NET Core/PostgreSQL backend**, digitizing field inspections through signed certificates and cutting office administrative workload by **up to 80%**.
- Reduced manual utility-bill processing from **30 hours to approximately 30 minutes per week** using **LLM-based OCR** and a React.js/Redux platform for document upload and review.

PROJECTS

dsh-agent-pulse | github.com/AlanWYChen/dsh-agent-pulse

- Built an **LLM-based monitoring plugin for DeepSeek Harness** that summarizes agent activity with supporting evidence and validated change references; verified behavior with **Node.js unit and integration tests**.

SKILLS

Languages	Python, JavaScript/TypeScript, Java, C#, SQL
Frameworks	Node.js, Django, Spring Boot, ASP.NET Core, React.js, Vue.js, SolidJS
Cloud and Data	Linux, AWS, GCP, Docker, Terraform; PostgreSQL, MySQL, Redis, Amazon SQS
AI development	Cursor, Codex, Claude Code, DeepSeek Harness, MCP; test-driven development

EDUCATION

Bachelor of Computer Science | University of Waterloo — 2021 – 2026
