WORK EXPERIENCE

Software Engineer (Co-op) | Scrawlr
Vancouver, BC, Canada — Sep 2025 – Dec 2025

- Shipped Lodgr's listing and property-management features from zero to production **in three weeks**, leading full-stack development (Node.js, SolidJS), coordinating with designers and QA.
- Increased **features shipped per week by 50%** by automating isolated per-branch AWS environments with Terraform, GitHub Actions, and CircleCI, reducing QA bottlenecks.
- Reduced production **mean time to resolution (MTTR) by 60%** with an LLM-based incident response system, using MCP-connected agents for diagnosis, fix generation, and validation, with engineer approval.

Software Engineer (Co-op) | UKG
Toronto, ON, Canada — May 2025 – Aug 2025

- Migrated a Spring Boot mobile gateway from service discovery to proxy routing with **zero downtime**, using a feature-flagged gradual rollout and service-discovery fallback.
- Built Splunk dashboards and configured PagerDuty alerts to surface client-side failures and support incident investigation.
- Consolidated legacy Android and iOS database inspection tools into one shared implementation, eliminating duplicate native code and standardizing local-database debugging.

Software Engineer (Co-op / Contract) | Metergy Solutions
Markham, ON, Canada — Jan 2024 – May 2025

- Improved daily meter-data receipt from **approximately 70% to 99.9%** across **10,000+ IoT meters** by replacing FTP uploads with an ASP.NET Core HTTP ingestion service.
- Rebuilt business-critical Microsoft Access tools as a web application with Python (Django), Celery, Redis, and VueJS, enabling concurrent team access and cutting job runtimes by **up to 50%**.
- Built a WPF app with a ASP.NET Core/PostgreSQL backend to digitize inspections from field data capture to signed certificates, cutting office administrative workload by **up to 80%**.
- Reduced manual utility-bill processing from **30 hours to approximately 30 minutes per week** using LLM-based OCR, with human review of low-confidence results.

SKILLS

Languages	Python, TypeScript, SQL, Java, C#
Backend	Django, FastAPI, Node.js, Spring Boot, ASP.NET Core, Celery
Databases	PostgreSQL, MySQL, Redis
Infra and Cloud	AWS, GCP, Docker, Terraform, Kubernetes, GitHub Actions, CircleCI
Tools	Splunk, Grafana, Sentry, Postman

EDUCATION

Bachelor of Computer Science | University of Waterloo — 2021 - 2026
